Building EOSC Through The H2020 Projects - Current Status And Future Directions

RDA Europe invited to participate in the EOSC Concertation Meeting jointly organised by DG CNECT and DG RTD on 9 and 10 September 2019.

The European Open Science Cloud (EOSC) has been promoted and supported by the European Commission over several years since the adoption of the [European Cloud Initiative in 2016](#). Through H2020 funding, the policy concepts are turned into the initial core technical infrastructure, tools and services of EOSC. EC also funded training and resources to enhance skills and laid the groundwork for the design of rules of participation and a governance framework. The governance structure has been established through the [Governance and Executive Boards](#).

Collaboration and coordination between the EOSC-related H2020 projects involved is key and the next 18 months will see a number of key outputs delivered.

The workshop aims to **increase the visibility** of the EOSC-related projects funded by the DGs CNECT and RTD, **explore their current state of achievement** and **discuss issues** and **potential regarding the next steps towards building the EOSC**. In addition to all currently active EOSC-related projects funded from the H2020 programme by the DGs CNECT and RTD, the meeting also provides an opportunity to interact with the members of the Governance and Executive Boards and to understand the work done within these bodies.

RDA as the strategic partner to represent the research data community for EOSC and to achieve progress in thematic areas

RDA Europe presents a [poster](#) on how the Research Data Alliance and RDA Europe 4.0 impact the EOSC implementation and advance research data sharing in Europe and will take part in the discussions planned on both days. See the [full agenda of the event](#).

RDA Node Slovenia Workshop: Research Data Management

Data management plans have become a key component of responsible data practices within the European Research Area (ERA). Data management plans support the research team in collection, analysis and publication of data, and can promote long-term preservation, reuse and access to research data. The workshop will present examples of data management plans, tools to create data management plans and processes within four Slovenian repositories that store and provide access to data.
