Andreas Veispak, Head of Unit, eInfrastructure and Science Cloud, DG CNECT, are being attended by LIBER's President, **Jeannette Frey**, Vice-President **Julien Roche** and Executive Director **Astrid Verheusen**.

SCIENCE CLOUD

What Research Libraries Can Do For EOSC

Specifically, we see research libraries as key to:

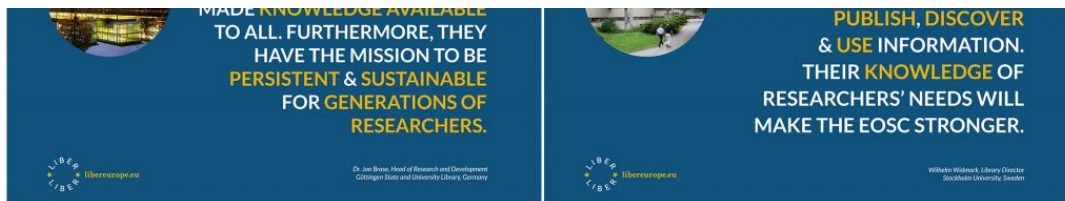

- **Connecting the EOSC** with core user communities;
- **Identifying training needs** and provide training, based on their extensive experience with information, research, OS literacy training;
- **Developing the EOSC** by:
 - **Sharing expertise** in the development and maintenance of OS services and infrastructure;
 - **Providing requirements** on 1) the inclusion of services, infrastructure and data 2) the EOSC discovery service 3) how to make services and data EOSC-compliant 4) EOSC data preservation.

What EOSC Can Do For Research Libraries & Their Institutions

For libraries, the EOSC offers an opportunity to make the research outputs of Europe's research libraries and their users more visible, thereby increasing re-use. In addition, it should be noted that:

- Research libraries manage critical infrastructure, tools, services and content for the research community. These should be included in the EOSC;
- International research library representatives should be consulted as the EOSC develops, to ensure that research libraries play a full role in stimulating uptake of the EOSC.

LIBER sees many ways for research libraries to collaborate in and contribute to the EOSC. Through today's meetings, we hope to strengthen our connection with the EOSC so that research library expertise continues to play a key role in building a thriving EOSC.

EUROPE'S RESEARCH LIBRARY NETWORK

In collaboration with our network of 400+ research libraries in over 40 European countries, LIBER is Powering Sustainable Knowledge in the Digital Age. We have a strong vision for the role of research libraries in 2022, based on Innovative Scholarly Communication, Digital Skills and Services, and Research Infrastructure.
